

Strategy & Growth Intern Final Presentation

Transforming Catalog Knowledge into an AI-Powered Business Asset

Michelle An

NA S&G – Marketing Operations, Catalog Program

August 11, 2026

Agenda

1. Project Scope
2. Knowledge Hub Overview
3. AI Enablement + Chatbot Demo
4. Impact
5. Continuous Improvement
6. Key Takeaways & Conclusion

What is Catalog? What do they do?

ME

What does Catalog do?

You

It's kind of a "black hole" to me — I could tell you a handful of things at most.

ME

I see, if only there was something to help inform newcomers and help answer my questions.

Project Scope

Utilize prior resources & documentation to increase Catalog efficiency

Two Areas of Ownership: The Knowledge Hub & DataVal Chatbot

The Knowledge Hub

Building and maintaining the source documentation as the single reference for catalog knowledge.

DataVal Chatbot

Turning that knowledge into a self-service AI chatbot that answers questions on demand.

From Scattered Knowledge to a Single Source of Truth

What the Output Includes

Knowledge Hub

Built for every level

Two Areas of Ownership: The Knowledge Hub & DataVal Chatbot

The Knowledge Hub

Building and maintaining the source documentation as the single reference for catalog knowledge.

DataVal Chatbot

Turning that knowledge into a self-service AI chatbot that answers questions on demand.

AI Enablement

Why the DataVal Chatbot was Needed

Why is pricing missing or incorrect?

~345
mentions

Why can't I see or test my product in DataTest?

~75
mentions

How do I know this is in scope for the current release?

~50
mentions

Responses

Self-Service
Responses

Inside the Chatbot Build

Tools and Knowledge System

Copilot Studio

Copilot studio allows for future Microsoft Teams integration, and allows for more connection with internal knowledge sources, making it the ideal platform to create the chatbot.

DataVal Chatbot

Instructions

You are the NA Catalog Data Validation Support Agent. Your purpose is to help Philips stakeholders and anyone else confused about Data Validation process, including timing, roles, tools, trackers, defect handling, known issues, and where to find approved documents.

When answering questions:

1. Answer only using the provided Data Validation and NA Catalog knowledge sources. Do not hallucinate answers you don't know.
2. Reference the "FAQ" document first. See if you can answer using ONLY that document.
3. Keep answers concise, practical, and accurate. When possible, include the source document or link the user should reference.

Workflows (Frontier)

Build agent flows with natural language, no code needed.

What Powers the Chatbot

Tools and Knowledge System

Primary Knowledge Sources:

Three documents used to build the knowledge base

1

Knowledge Hub

Central hub of structured catalog knowledge

2

DataVal Basics PowerPoint

Core concepts and validation fundamentals

3

Release Calendar

Schedule of upcoming releases and key dates

Chatbot in Action

Business Impact

1. Catalog Visibility

Greater understanding of Catalog's role and its connections across the commercial and service lifecycle.

2. Process-Mapping Mindset

A repeatable approach for documenting processes, clarifying ownership, and supporting continuous improvement.

3. Self-Service Enablement

Trusted answers at the moment of need: faster access, less search time, and reduced reliance on SMEs and memory.

Continuous Improvements

Next Steps for the Catalog Program

Establish a Dedicated Knowledge Management Gig

Talent from across the organization driving more continuous updates.

Gig Opportunity

Business value: Creates shared ownership, supports more continuous updates, and helps prevent the knowledge base from becoming outdated.

Prepare for a Phased Chatbot Release

Beta in October, full release projected for November.

Business value: Reduces implementation risk, allows improvements before broader adoption, and provides a realistic use case during DataVal.

Expand the Depth of the Chatbot

Create new Workflows to direct users to links, as well as access to Excel documents. Possibly connect to sources outside of SharePoint, allowing for an even stronger Chatbot.

Business value: Turns the chatbot from a general FAQ tool into a more practical, task-oriented support resource.

Key Takeaways

Insights Through Communication

Beyond just data, you can uncover a lot about process knowledge gaps and issues just by speaking to stakeholders and employees directly involved with the work.

The Value of Process Understanding

Recognized that operational excellence depends on understanding how cross-functional teams interact throughout the commercial lifecycle.

Applying AI to Business Challenges

Gained experience designing AI-ready documentation to support future Microsoft 365 Agent and Copilot capabilities. Demonstrated how AI can reduce dependency on subject matter experts by enabling self-service knowledge access.

PHILIPS

Chatbot Demo – Non Video

The screenshot displays the DataVal Chatbot interface. At the top, there are tabs for 'Build', 'Preview', 'Evaluate', and 'Monitor'. The 'Preview' tab is active. On the left, there is a sidebar with icons for home, chat, and settings. The main chat area shows a conversation with the 'DataVal Chatbot'. The chatbot's name is 'DataVal Chatbot'. The first message is 'Hello! How can I help you today on DataVal?'. The user's question is 'Why is pricing missing or incorrect?'. The chatbot's response is divided into three sections: a primary answer, further guidance, and sources.

DataVal Chatbot

Hello! How can I help you today on DataVal?

Why is pricing missing or incorrect?

DataVal Chatbot

Based on the FAQ and NA Catalog reference documents, **missing or incorrect pricing during Data Validation typically occurs** because price data isn't sourced from the validation tracker or Excel templates at all—it comes directly from SAP at the time the **Portfolio Update** executes. DataVal validations are not meant to validate price accuracy; they only verify commercial attributes, hierarchy, and other catalog fields.

Here are the main reasons documented for missing or incorrect pricing:

- 1. Out of Scope for DataVal**
Pricing is populated from SAP after go-live during the PAPI/PO upload phase. DataVal templates and trackers do not carry list prices or discounts, so this field is not validated by the process.

Guidance / What to Check:

- Confirm whether this is a template issue or an SAP load issue.
- If pricing is incorrect or missing, the issue must be raised to the SAP Pricing/Condition Maintenance team, not resolved in the Catalog Validation step.
- For catalog-level validation, log the defect as an FYI, but note that resolution is outside the DataVal scope.

Source: FAQ on Data Validation and NA Catalog Reference Manual [1](#) [2](#).

If you need exact escalation paths or SAP contact details for pricing corrections, please refer to the **Contacts.xlsx** provided in the upload set or contact the Catalog team for the responsible pricing team contact.

Chatbot Additional Information

How the Chatbot is Evaluated

The screenshot shows the 'DataVal Chatbot' interface with the 'Evaluate' tab selected. The main area is titled 'Review your test cases (8)' and contains a table of test cases. A sidebar on the right is titled 'Configure test set' and includes options for 'Data type: Conversation', 'Name: Evaluate Agent', 'Test method: General quality', and 'User profile'. A blue arrow points from the 'Evaluate' button in the sidebar to the 'Output of Evaluation' section below.

Conversation	Total messages
What is Data Validation (DataVal)?	6
Who participates in DataVal?	5
What am I expected to test?	6
What should I do if I find an issue?	5
What is DataTest?!	5
What does 'in scope' mean?	5

Output of Evaluation

Evaluate Agent 10 test cases • Data type: Conversation	<button>Evaluate Agent</button>	An, Mic...	Jul 21, 2026, 1:46 PM	General quality	90%
Evaluate Agent 10 test cases • Data type: Conversation	<button>Evaluate Agent</button>	An, Mic...	Jul 21, 2026, 10:54 AM	General quality	80%

Evaluating with Test Cases

- A .csv file holds the test set of common DataVal questions
- Each question is paired with its desired answer
- The file is run through the chatbot and responses are scored
- Weak answers point back to gaps in the source documents
- Re-run after each update to track accuracy over time
